These solution was responsible for recording, processing and managing members' savings, determining loan eligibility status of members, disbursing of loans, recording and tracking of payments, disbursing dividends

* Recording, processing and managing members' savings
* determining loan eligibility status of members based on the statutory labor laws
* Managing the process of loan application end to end
* Disbursing of loans
* Tracking paybacks and Debt management.
* Disbursing dividends
* Balancing of accounts.

Devops: AWS
Languages: Laravel, Angular

Marivat

Automated tax collection solution developed for Federal Inland revenue Service (FIRS). This project included

* Direct integration with the ERP of the concessionaires to get transactions out of their system.
* Calculate the Vatable amount from these transactions, excluding VAT exempt/ zero rated supplies and services
* Integration with a payment gateway, in this case (Remita) to set up a direct debit mandate for deducting the vat payable.
* Report and tracking of payment failures and downtime.

Devops: Azure, Azure container instances, Docker
Languages: meteorjs, nodejs

Social Lender

A lending platform that determines eligibility based on social reputation score as a leverage for disbursing loans to individuals. This leveraged on the strength of the

individual's social network and certain key identifiers which is passed through an AI algorithm to determine the social reputation score.

Devops: DigitalOcean, AWS
Languages: meteorjs, nodejs
